Author: Auer, Florian

Format: 19,0 x 29,0 cm

ISBN: 978-3-96245-008-3

€49.00 *

Prices incl. VAT but exclude shipping costs

Railway infrastructure management involves a high degree of complexity. Economic, legal, political and, above all, technical interdependencies are required. The aim of the Best Practice Permanent Way Maintenance series is to describe these relationships in a structured way for all stakeholders. Infrastructure Management Volume 1 looks at aspects of infrastructure management with particular reference to the single European railway area. Based on best-practice examples from Central Europe, measures for the targetted retrofitting and improvement of the infrastructure maintenance of the existing network are presented. In many cases, infrastructure operators are faced with a generational change, which accelerates the process. Modern information and communication technology can simplify the comprehension and presentation of complex contexts. Modified approaches to asset management and life-cycle management enable implementation of the "transparent permanent way" or the "railway 4.0". The included pdf e-book allows users to search and access all terms and references electronically using their PC, Tablet or Smartphone
