"Rolling stock in the railway system" is a technical book in three volumes intended for industry professionals as well as railway enthusiasts. The work was written by engineers from several major European companies and of seven different nationalities. It takes stock of the modern techniques applied to rolling stock, while placing it within a rapidly evolving railway system, following the opening of the European borders. The second volume describes in its first chapter (chapter 6) the technical characteristics and architectures of trains, depending on the transport service delivered (tramways, metros, suburban, regional, intercity and high speed, freight), a specific section being dedicated to industrial design. The following chapter 7 is dedicated to on-board "mechanical" sub-systems (comfort and related internal arrangements, structures, guiding systems and coupling), specific sections being dedicated to passive safety. The other volumes are available as separate items: The first volume of the three volume work acquaints the reader with the railway world and railway rolling stock by a historical approach (chapter 1), followed by a description of the railway system (chapter 2), and an analysis of the management of the system by reference to...
